SMASHED BURGER

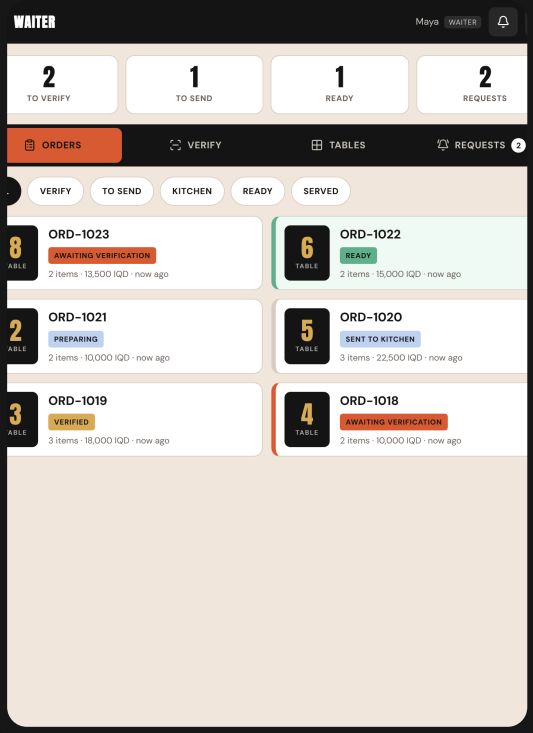

ERBIL · DINE-IN

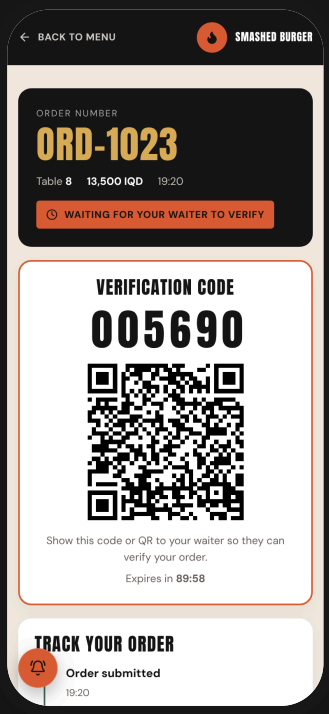

TABLE ORDERING SYSTEM

Guests scan the QR code on their table and order from their phone. Your waiter confirms each order in person. The kitchen cooks it. You see everything.

SCAN · ORDER · VERIFY · SERVE

THE IDEA

ORDER FROM THE TABLE. SERVED BY YOUR TEAM.

Guests no longer wait to catch a waiter just to order. Your waiters spend their time on what matters: checking the order, looking after guests and serving food.

1 SCAN
Guest scans the QR code on the table

2 ORDER
Browses the menu, customizes, sends the order

3 VERIFY
Waiter checks the order at the table with a code or QR

4 COOK
Kitchen receives only confirmed orders

5 SERVE
Waiter is told it is ready, guest follows along live

GUESTS

Order at their own pace from any phone. No app to install. Menu in English, Kurdish and Arabic.

WAITERS

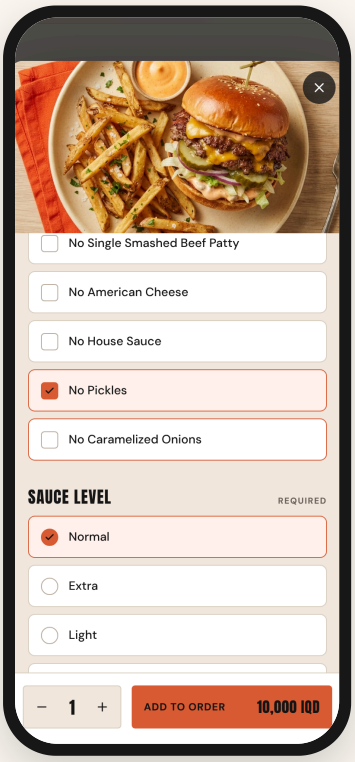

See every order and request on a tablet or phone. Verify with a 6-digit code or by scanning.

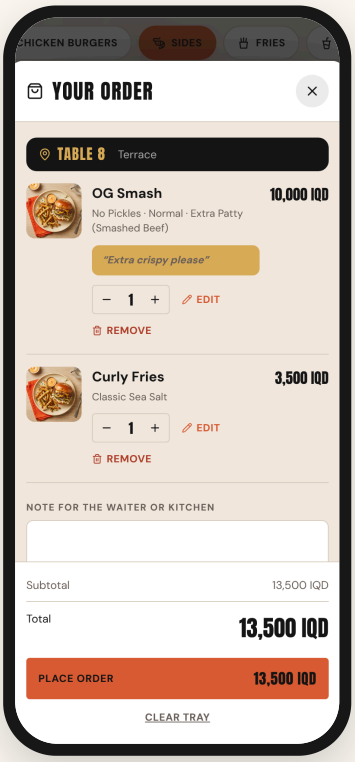

KITCHEN

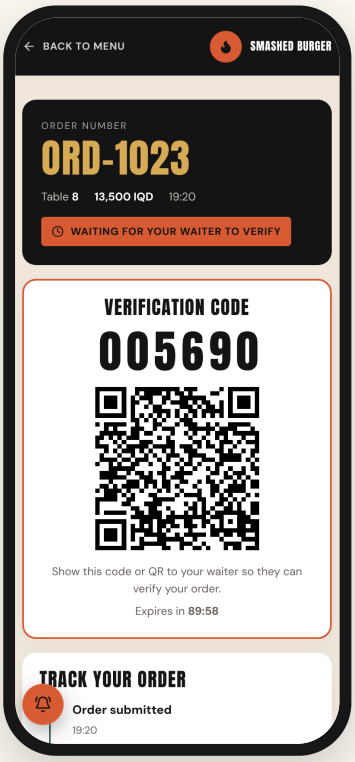

A big, clear screen with every order, every change and every special request.

OWNER

Control the menu, prices, tables, staff and settings. Real sales and order numbers, always up to date.

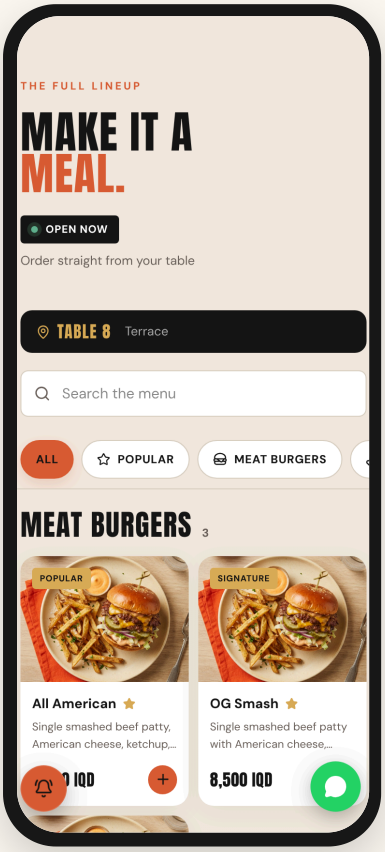

Why verification? A guest orders from their own phone, so the waiter confirms the order in person before it reaches the kitchen. That stops mistakes, jokes and orders for the wrong table.

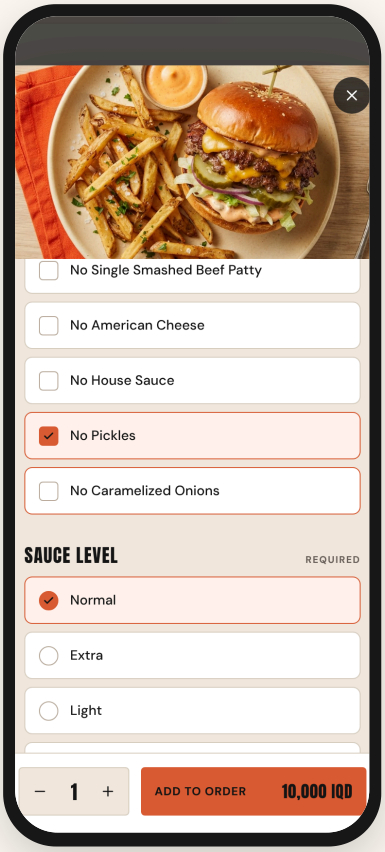

FOR YOUR GUESTS

A MENU THAT SELLS ITSELF

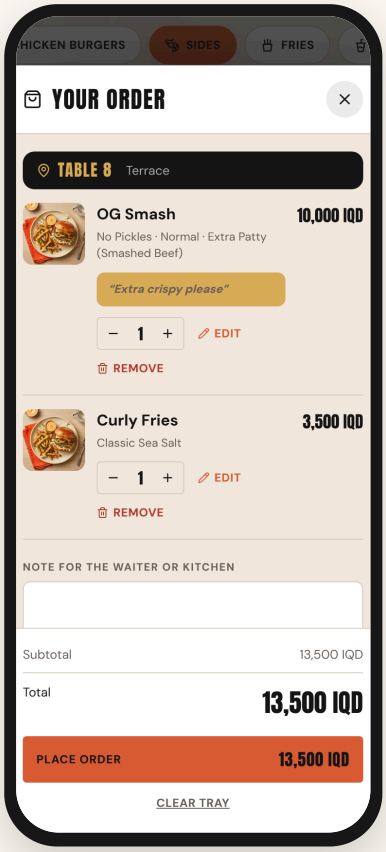

Photos, clear prices and simple choices. Guests build their burger exactly the way they like it.

Browse
Categories, search, popular dishes and offers. Their table is already selected.

Customize
Add extra patty or cheese, remove ingredients, choose sauce and size. The price updates as they choose.

Review
Clear list, quantities, special notes for the kitchen and the final total.

- **Every dish has its own options**, set by you: size, extras, removals, sauces, ice.
- **Allergens and ingredients** shown on the dish when you add them.
- **Sold-out items** disappear from ordering the moment you mark them.
- **Prices are always correct.** The final total is calculated by the system, and guests cannot change it.
- **Special offers** show the old and new price.
- **Works on any phone**, tablet or computer.

KNOWING THE TABLE

EVERY ORDER BELONGS TO A TABLE

The system always knows where an order is going, so food reaches the right guests.

1 · SCAN THE TABLE QR

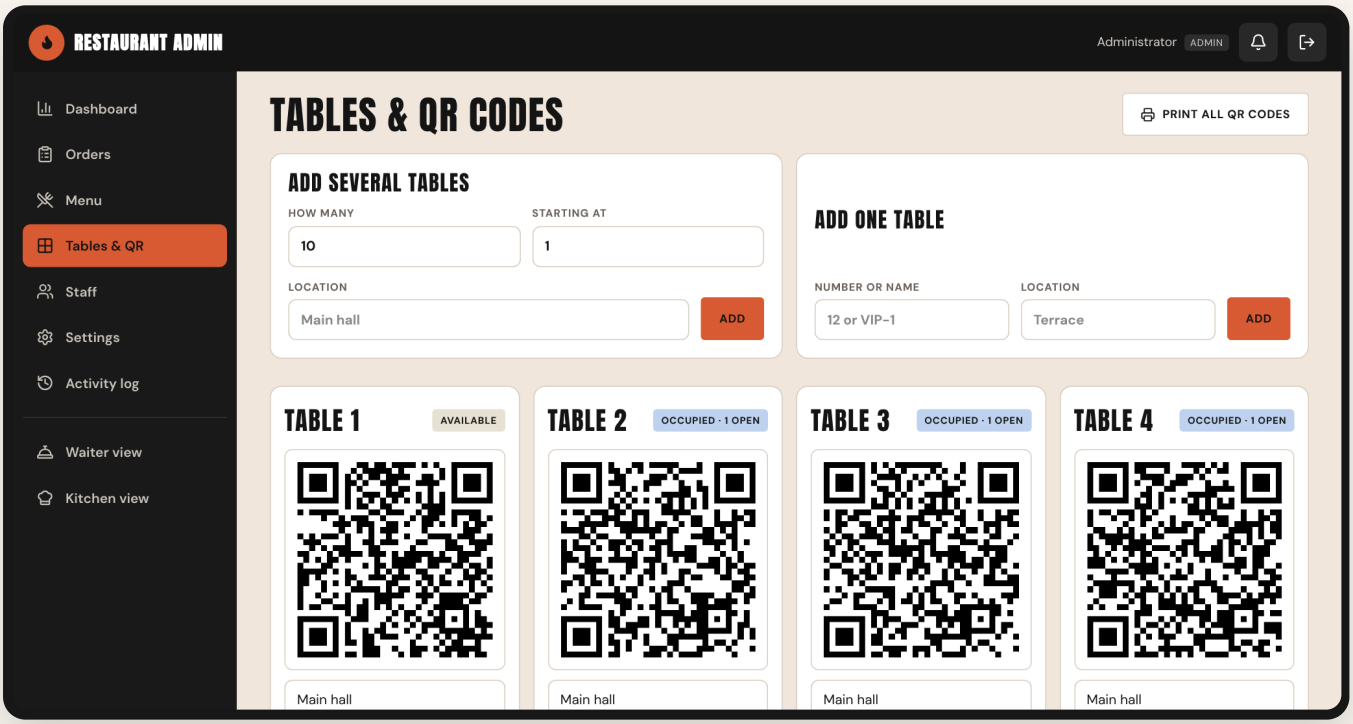

Each table has its own printed QR code. Scanning it opens your menu with that table already chosen. This is the main way guests order.

2 · CHOOSE A TABLE

If a guest opens the menu without scanning, they can pick their table from the list, if you allow it. These orders are always verified by a waiter.

3 · WAITER STARTS IT

The waiter shows a one-time QR on their tablet and the guest scans it. Useful for guests who cannot scan the table code.

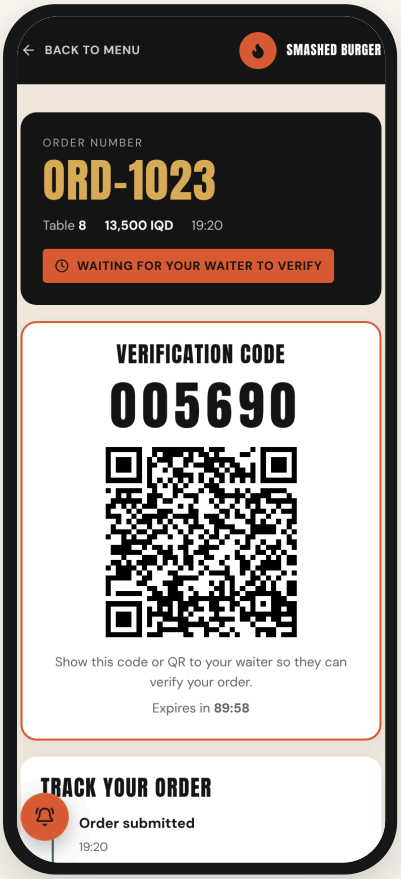

- **Print all QR codes** in one click, or download each as an image.
- **Lost or copied a QR?** Make a new one and the old printout stops working.
- Switch tables on or off, mark them occupied or free, and assign a waiter.
- Table numbers are never the only protection: each QR contains a private code.

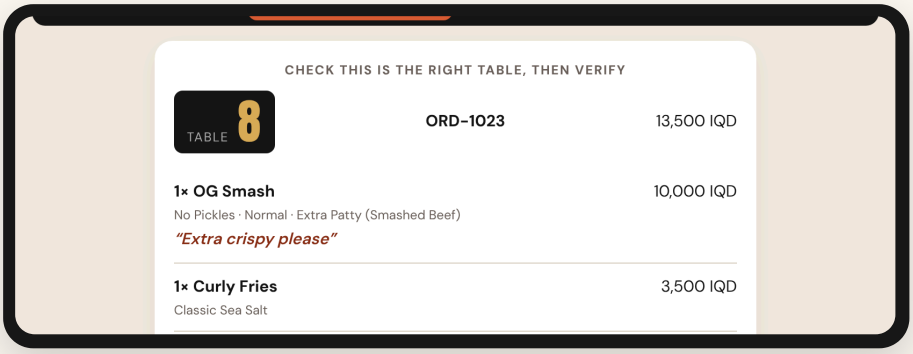

THE KEY STEP

THE WAITER CONFIRMS EVERY ORDER

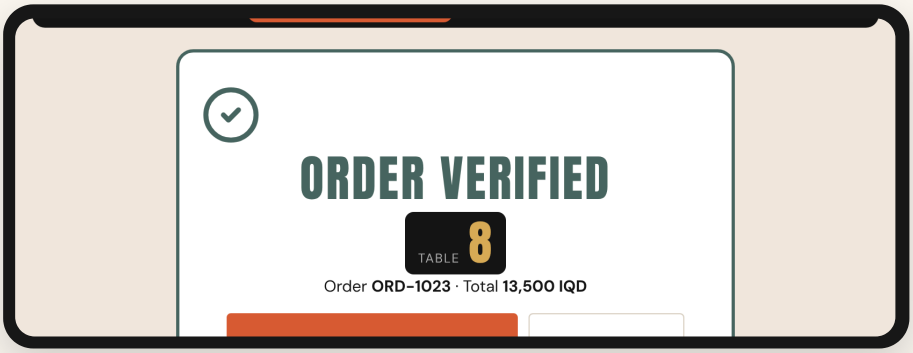

After ordering, the guest sees a 6-digit code and a QR code. The waiter visits the table and checks the order.

The guest's screen
Order number, code, QR and a live timeline.

Waiter reviews the order
Table number, items, notes and total are shown before anything is confirmed.

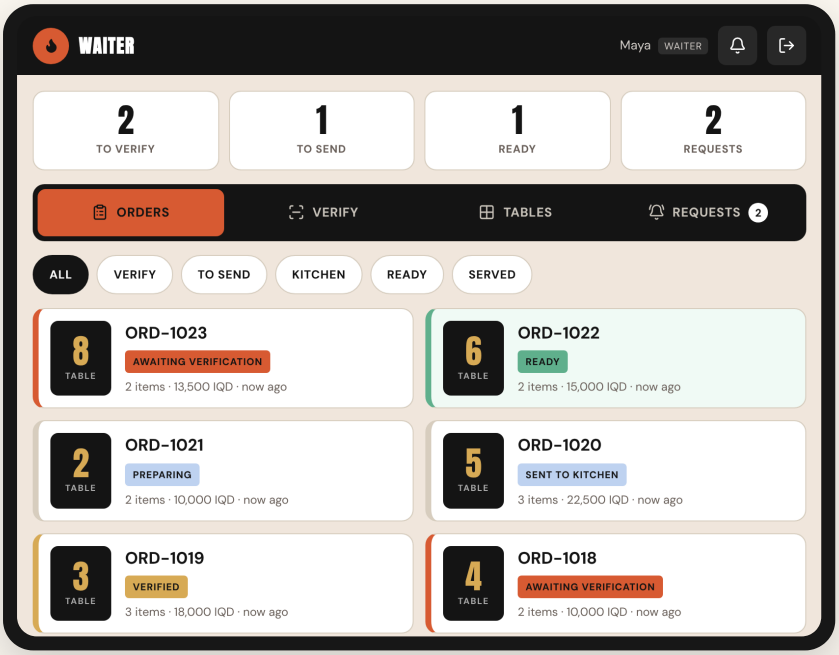

Verified, then sent to the kitchen
The order is marked with who verified it and when.

- **Two ways to verify:** type the guest's code, or scan their QR with the tablet camera.
- **Wrong or old code?** A clear message appears. Codes expire (default 90 minutes) and work once.
- **No accidents:** the waiter must see the table and items before confirming.
- **Rejected or cancelled** orders need a reason, and the guest is told.

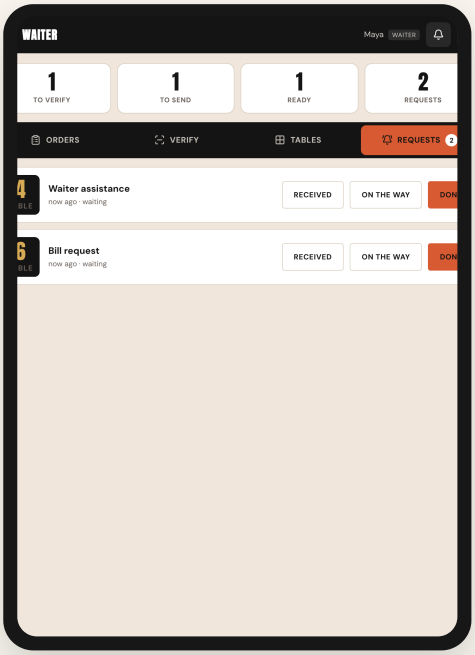

FOR YOUR WAITERS

THE WHOLE FLOOR IN ONE SCREEN

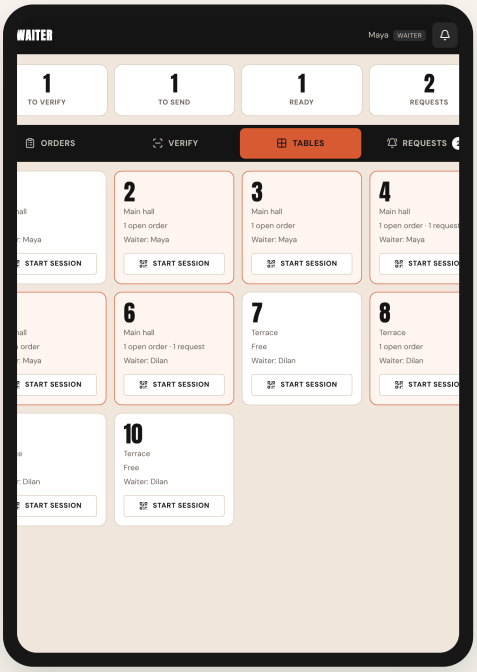

Made for a tablet or phone while walking around. Large buttons, clear colours, and an alert sound when something needs attention.

Orders
New, waiting for verification, in the kitchen, ready to serve. Tap an order for the full details.

Guest requests
"Call waiter", water, napkins, extra utensils and the bill, each with a status.

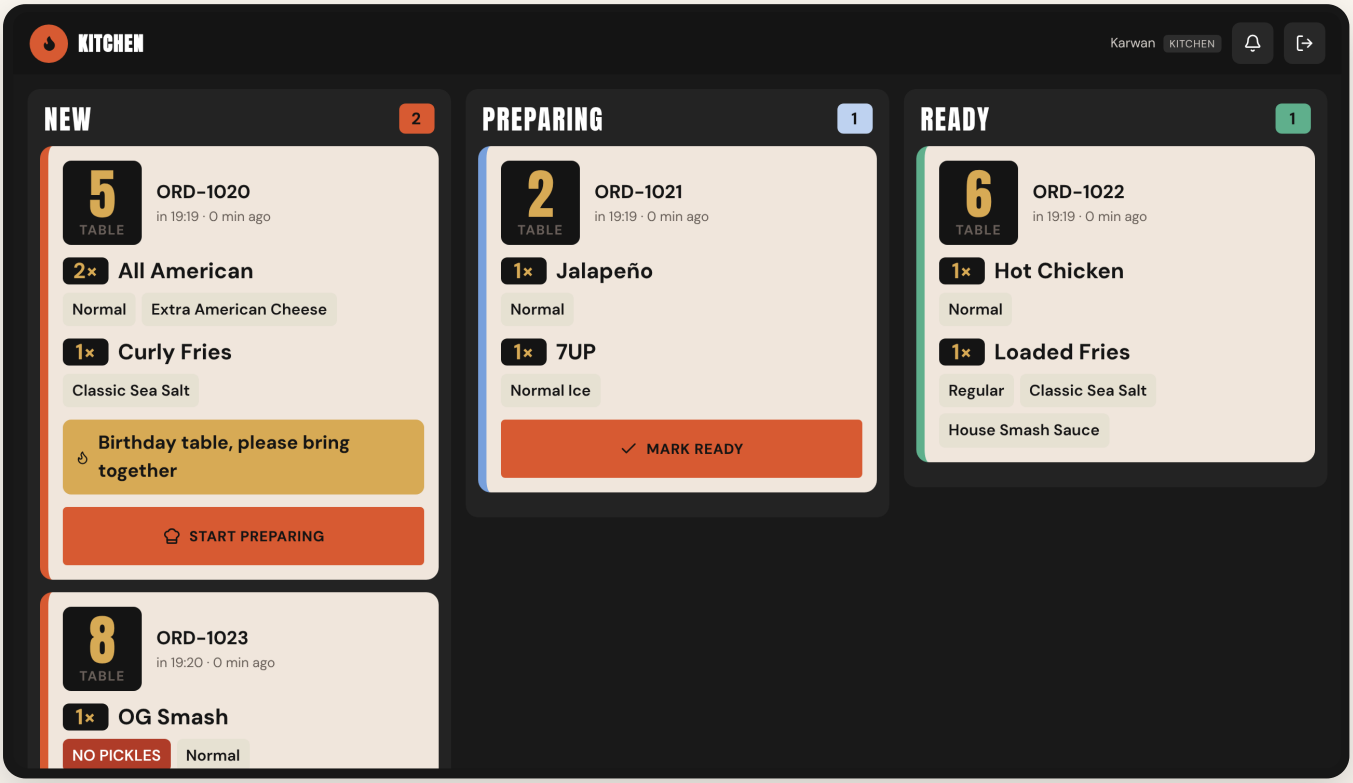

Tables
See which tables are busy and start a session for a guest.

- **Told when food is ready** by the kitchen, so nothing waits on the pass.
- **Verify, confirm and serve** in a few taps.
- **Add private notes** to an order for the team.
- **Cancel with a reason** when a guest changes their mind.
- Every action is saved with the waiter's name.

FOR YOUR KITCHEN

EVERY ORDER, NOTHING MISSED

A simple three-column screen above the grill: New, Preparing, Ready.

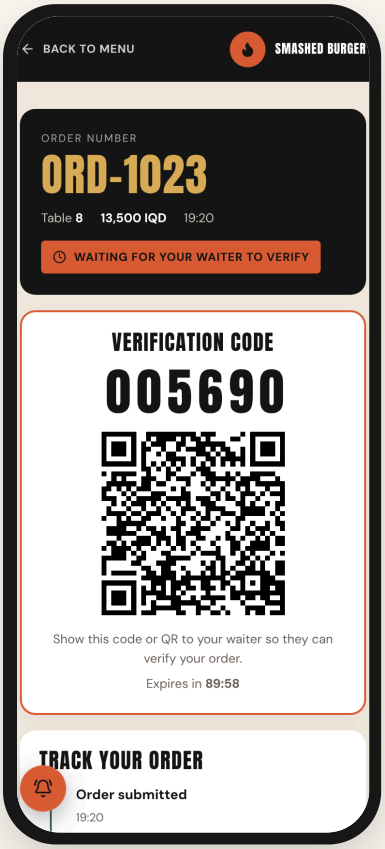

- **Only confirmed orders** appear. Unverified orders never reach the kitchen.
- **Table number** in large type on every order.
- **"No pickles", "no onions"** stand out in red so they are not missed.
- **Special instructions** are highlighted in yellow.
- **Orders waiting too long** get a warning outline.
- **One tap** to start preparing and one tap to mark ready. The waiter is notified straight away.

Kitchen staff only see the kitchen screen. They cannot reach prices, staff or settings.

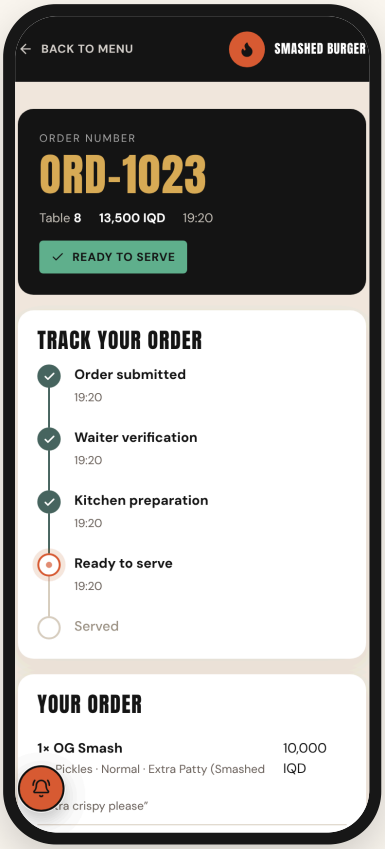

ALWAYS IN THE LOOP

GUESTS SEE WHAT IS HAPPENING

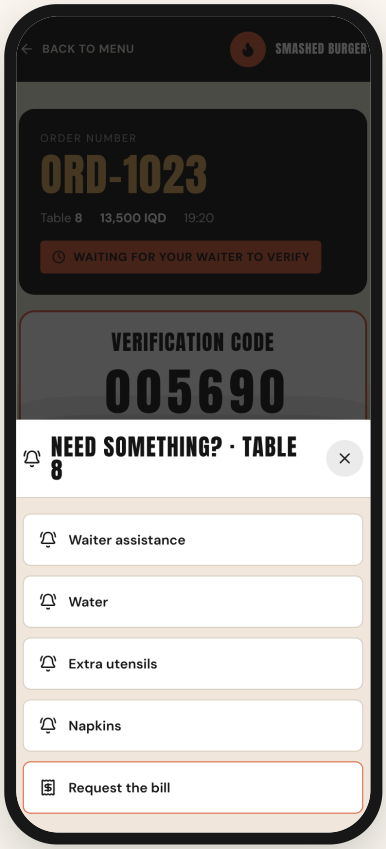

No more "where is my food?". The guest's order page updates by itself.

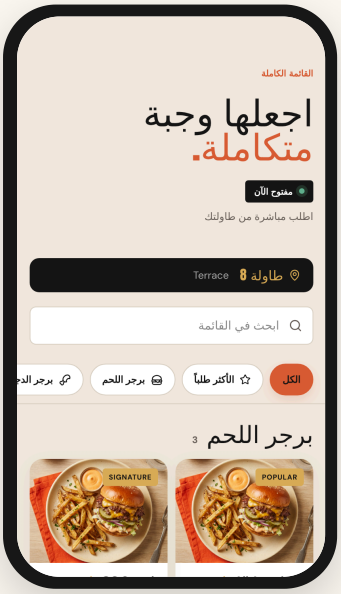

Waiting for the waiter
The code and QR to show.

Ready to serve
Every step lights up as it happens.

Need something?
Call the waiter or ask for the bill. No repeat requests.

THREE LANGUAGES

- English, Kurdish (Sorani) and Arabic, with right-to-left layout.
- Dish names and descriptions can be translated by you in the dashboard. Your original text is never replaced.
- Prices and numbers are shown in the guest's language.

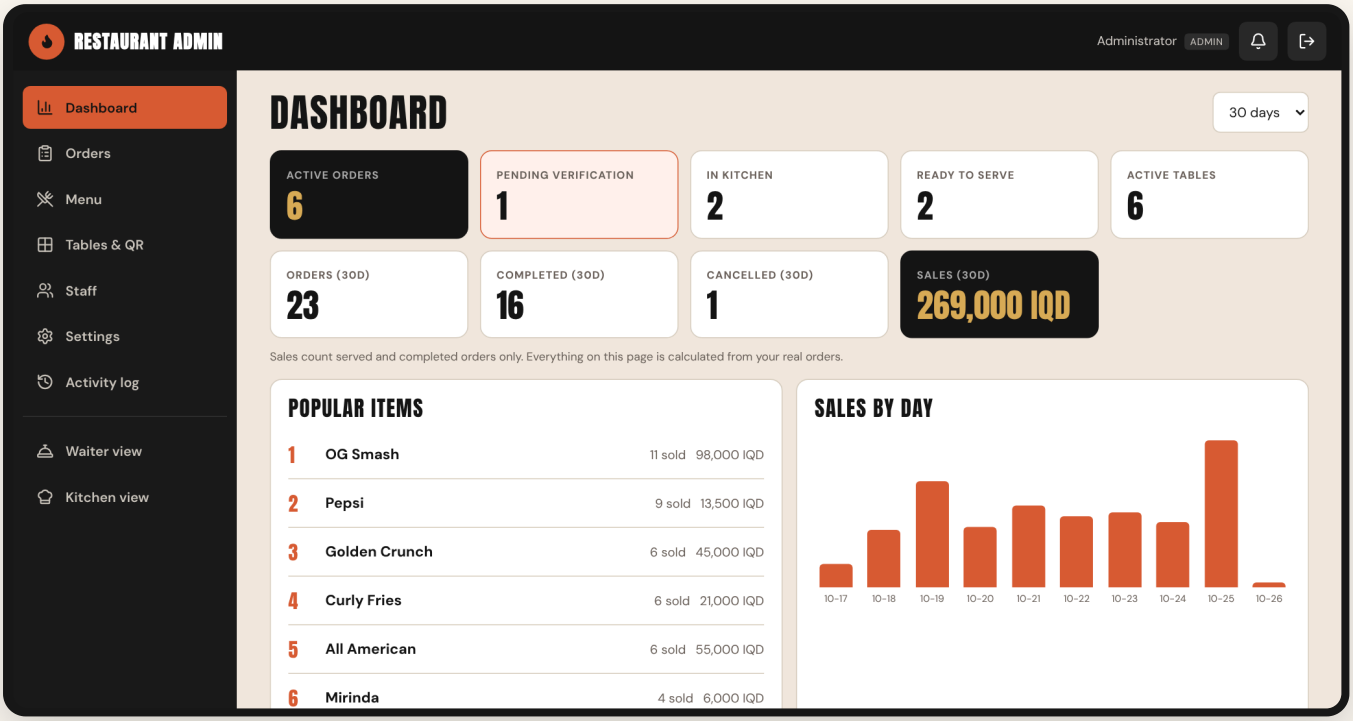

ORDER STATUS

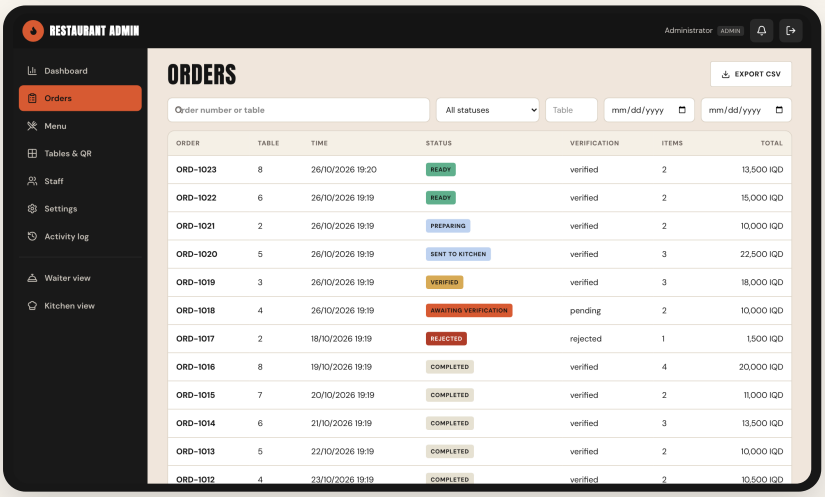

- Guests can cancel before the waiter verifies. After that, the waiter helps.
- An estimated preparation time is shown only when you have set one for the dish.

FOR THE OWNER

KNOW YOUR RESTAURANT

Live numbers from your real orders. Nothing is estimated.

All orders

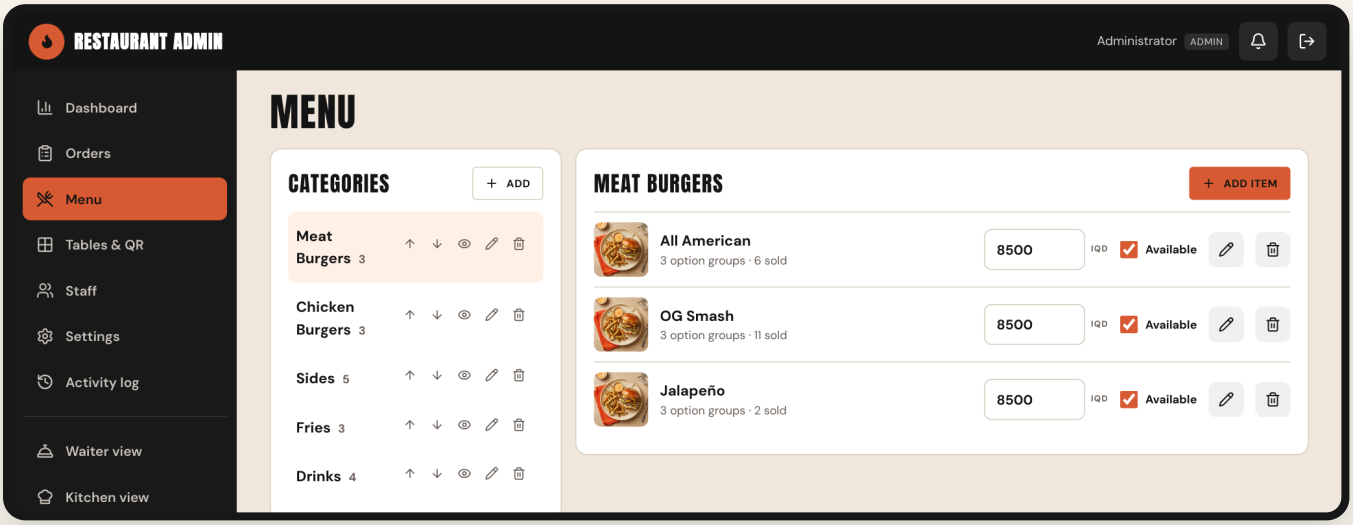

Search by number or table, filter by status or date, open any order and see who did what. Export to a spreadsheet.

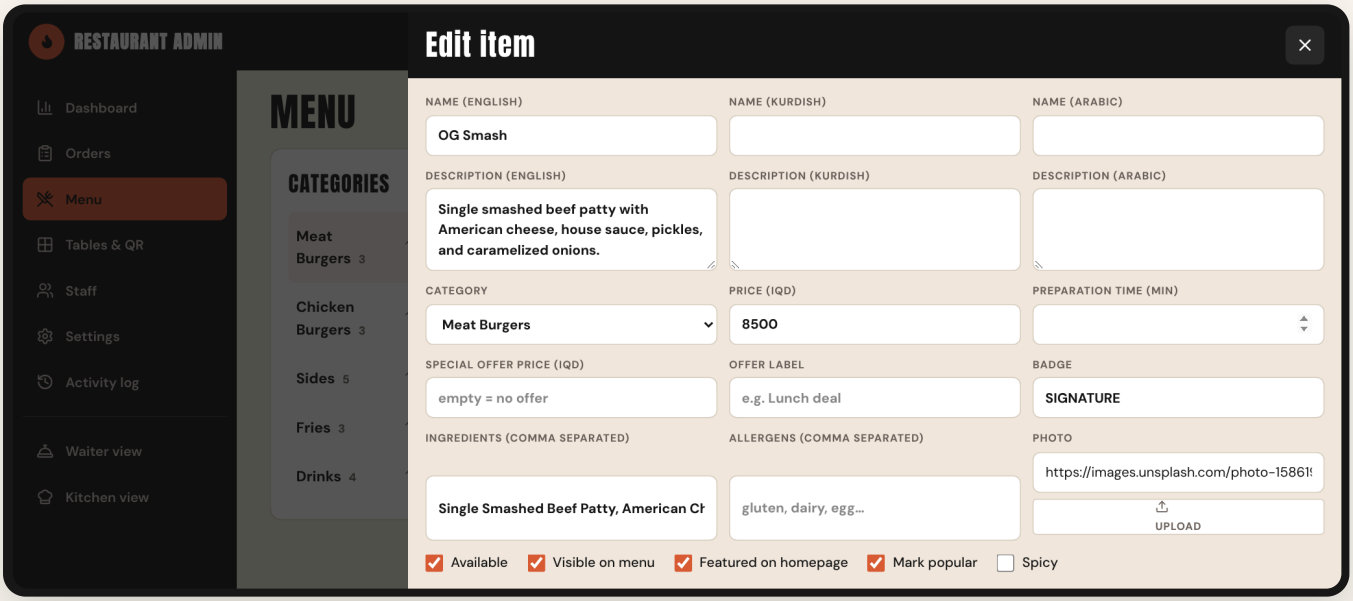

- Orders today and over time
- Orders waiting, cooking and ready
- Sales and busiest days
- Best-selling dishes
- Tables in use
- Cancelled orders and reasons

YOUR MENU, YOUR CONTROL

CHANGE IT IN SECONDS

Out of shrimp? Untick one box. New price? Type it. Changes show to guests straight away.

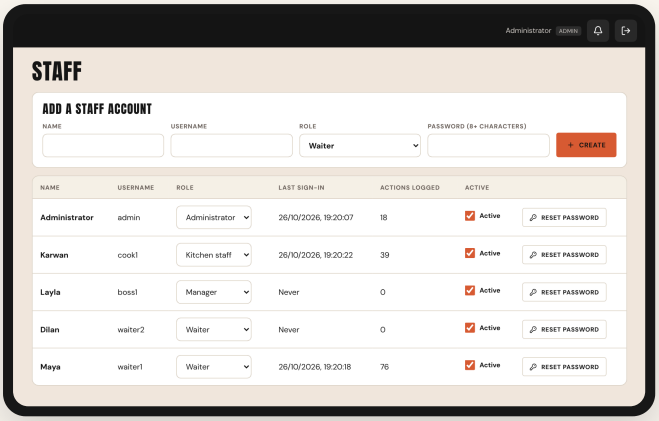

The dish editor
Names and descriptions in three languages, price, special offer, preparation time, photo upload, ingredients, allergens and your own option groups.

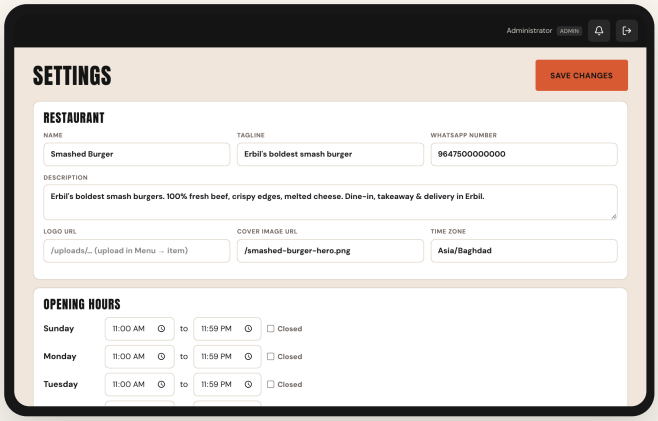

- Add, rename, hide, delete and reorder categories.
- Mark dishes available or sold out with one click.
- Past orders always keep the price guests paid.
- Your existing menu and prices are already loaded.

YOUR TEAM AND YOUR RULES

EVERYONE SEES ONLY WHAT THEY NEED

Staff
Create accounts, set roles, switch people off, reset passwords.

Settings
Opening hours, tax, service charge, workflow rules.

WHAT THEY CAN DO	WAITER	KITCHEN	MANAGER	ADMIN
Verify, confirm and serve orders	●	–	●	●
Prepare orders and mark ready	–	●	●	●
Answer guest requests	●	–	●	●
Edit menu, prices and availability	–	–	●	●
Manage tables and QR codes	–	–	●	●
See sales and reports	–	–	●	●
Manage staff, settings and activity log	–	–	–	●

- **Opening hours** and an "Open now" label for guests.
- **Tax and service charge** added automatically.
- **Pause ordering** any time, while the menu stays visible.
- **Choose how strict:** every order verified (recommended) or QR orders go straight to the kitchen.
- **Choose which requests** guests can send: waiter, water, napkins, utensils, bill.
- **Activity log** of who did what and when.

THE ORDER JOURNEY

CLEAR STEPS, CLEAR OWNERS

Every order moves through the same steps, and only the right person can move it forward. Steps cannot be skipped.

SUBMITTED

WAITING FOR WAITER

Guest placed the order. Code and QR shown.

VERIFIED

WAITER CHECKED IT

Right table, right items.

SENT TO KITCHEN

CONFIRMED

Waiter sends it to the kitchen.

PREPARING

BEING COOKED

Kitchen started.

READY

READY TO SERVE

Waiter is notified.

SERVED

AT THE TABLE

Guest enjoys the food.

COMPLETED

DONE

Counted in your sales.

CANCELLED

STOPPED

Always with a reason.

WHO MOVES THE ORDER

STEP	GUEST	WAITER	KITCHEN
Place order	•	–	–
Verify and send to kitchen	–	•	–
Start preparing, mark ready	–	–	•
Mark served, complete	–	•	–
Cancel	before verification	**with a reason**	–

You decide how strict it is: for example, whether every order must be verified, and whether waiters may serve drinks without the kitchen.

SAFE AND DEPENDABLE

BUILT SO NOTHING GOES WRONG

Plain-language protections for your guests, your staff and your sales.

FAKE ORDERS STOPPED

Nothing reaches the kitchen until a waiter has seen the table and confirmed. Codes expire and can only be used once.

PRICES CAN'T BE CHANGED

Totals are calculated by the system from your menu. Guests cannot alter prices, and unavailable dishes cannot be ordered.

NO DOUBLE ORDERS

If a guest taps twice or the connection drops, only one order is created.

PRIVATE TO EACH GUEST

A guest can only see their own order. Order links are long, secret and cannot be guessed.

STAFF ACCESS BY ROLE

Every person signs in with their own account. Waiters and kitchen staff cannot see settings, staff or reports. Switch someone off and they are out at once.

EVERYTHING ON RECORD

Every order keeps its history: who verified it, who prepared it, and when. The owner can see all activity.

PRICES STAY AS ORDERED

Change a price tomorrow and yesterday's orders still show what the guest paid.

PROTECTED SIGN-IN

Passwords are stored securely. Too many wrong attempts are blocked for a while.

PHOTOS CHECKED

Only real image files can be uploaded.

ALWAYS KEEPS WORKING

Screens refresh by themselves, even if the live connection drops for a moment.

Tested end to end

The full ordering flow, staff permissions and protections above were checked with automated tests and by walking through every screen.

WHAT YOU NEED, WHAT IS NOT INCLUDED

TO RUN IT

- **Tables with QR codes.** The dashboard makes and prints them for you.
- **A phone or tablet** for each waiter, with internet.
- **A screen in the kitchen**: a tablet, a monitor or a phone.
- **Wi-Fi or mobile data** for guests' phones.
- **Staff accounts**, created in minutes in the dashboard.

SETTING UP

- Your menu, prices and categories are already loaded.
- Add your tables and print the QR codes.
- Create waiter and kitchen accounts.
- Set your hours, tax and workflow.
- Add your own dish photos.
- Do a test order with your team.

GOOD TO KNOW

PAYMENTS

Guests can ask for the bill, but payment is taken at the table as today. Online payment is not included.

ONE RESTAURANT

Built for a single restaurant and its team. Multiple branches are not included.

GUESTS' ALERTS

Guests get live updates while their order page is open. They are not sent messages after closing it.

KURDISH TEXT

The Kurdish wording should be read through by a native speaker before launch.

WAITER TABLES

You can assign waiters to tables. For now, every waiter can still see all tables.

PHOTOS

Upload your own dish photos for the best look. Menu photos currently come from stock images.

Ready to see it live? Try a real order: scan a table code, order a burger, verify it as the waiter, and watch it arrive in the kitchen.
