SMASHED BURGER

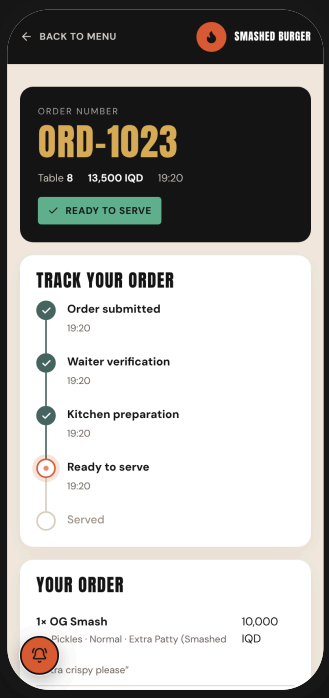

COMPLETE FEATURE LIST

EVERY FEATURE IN ONE PLACE

Website, table ordering, waiter verification, kitchen screen, owner dashboard and the controls to pause anything. Everything the system does for your restaurant.

AT A GLANCE

ONE SYSTEM, SEVEN PARTS

Each part works on its own and together they run your floor from the first scan to the last plate.

1 · WEBSITE

Your brand, story, reviews, map and live menu in three languages.

2 · GUEST ORDERING

Scan, browse, customize, order and follow it live from any phone.

3 · TABLES AND QR CODES

Every table has its own private QR code. Print, replace and switch off in a click.

4 · WAITER VERIFICATION

Waiters confirm each order at the table by code or QR before the kitchen sees it.

5 · KITCHEN SCREEN

New, preparing and ready, with changes and special requests highlighted.

6 · OWNER DASHBOARD

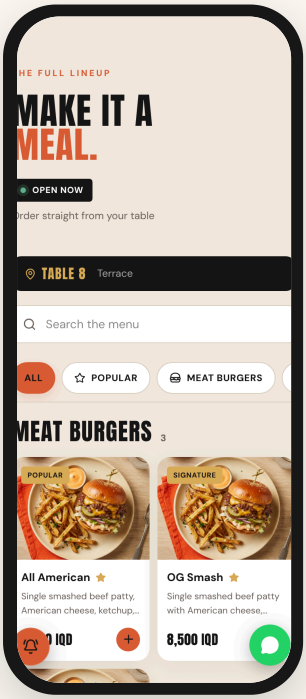

Real sales and orders, menu control, staff, settings and activity history.

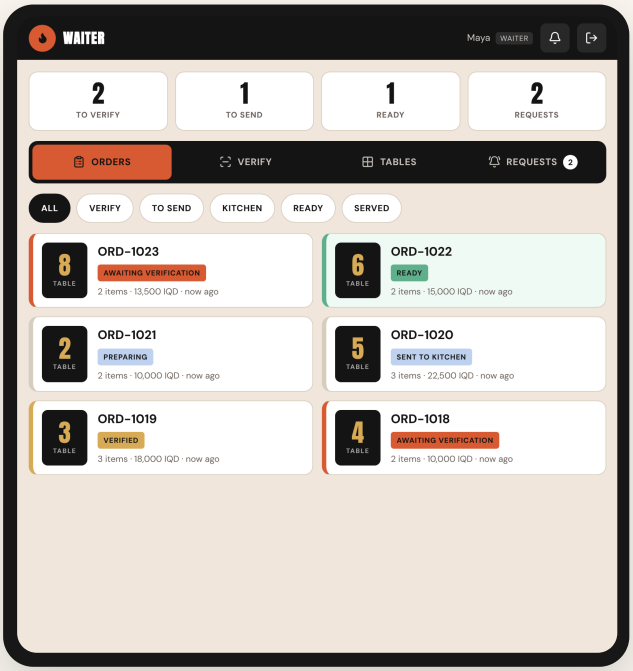

7 · QUICK SWITCHES NEW

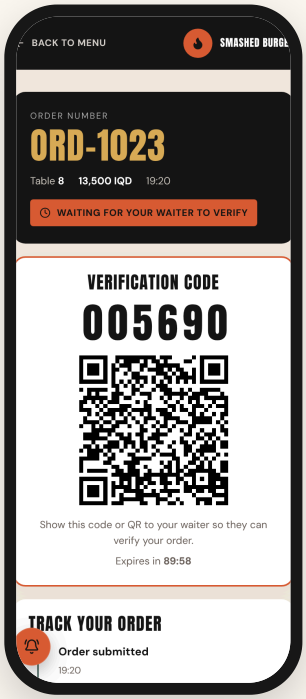

Pause ordering, delivery or any request for a while, and tell guests why.

BUILT FOR ERBIL

English, Kurdish and Arabic. Prices in IQD. Right-to-left layouts.

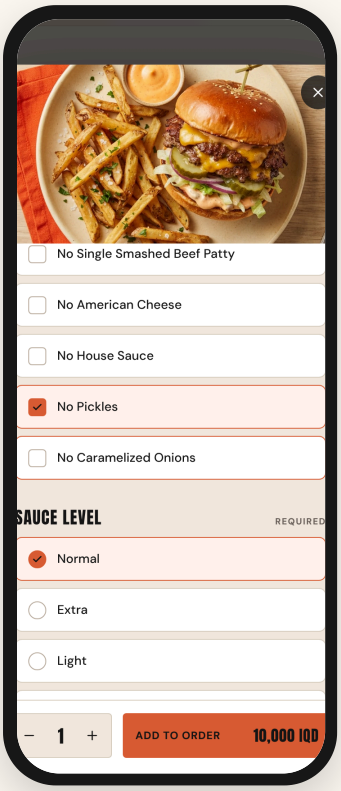

GUEST ORDERING

EVERYTHING A GUEST CAN DO

BROWSE AND CHOOSE

- Categories, search, popular dishes and special offers
- Dish photo, description, price, spicy marks and badges
- Ingredients and allergens shown when you add them
- Preparation time shown when you set it
- Sold-out dishes cannot be ordered

CUSTOMIZE EVERY DISH

- Options you create per dish: size, extras, removals, sauces, ice
- Choose one or several, required or optional, with extra prices
- Special instructions for the kitchen
- Quantity and a live price as they choose

TRAY AND ORDER

- Edit, remove or clear items before sending
- Final total calculated by the system, with tax and service charge if you use them
- Order number, 6-digit code and QR code after ordering
- Cancel before the waiter verifies

ALWAYS INFORMED

- Live status page with a step-by-step timeline
- Estimated time when you set preparation times
- Phone vibrates and a browser alert shows when the order moves on
- Ask for a new code if one expires
- “My order” button brings them back to their order

ASK FOR SERVICE

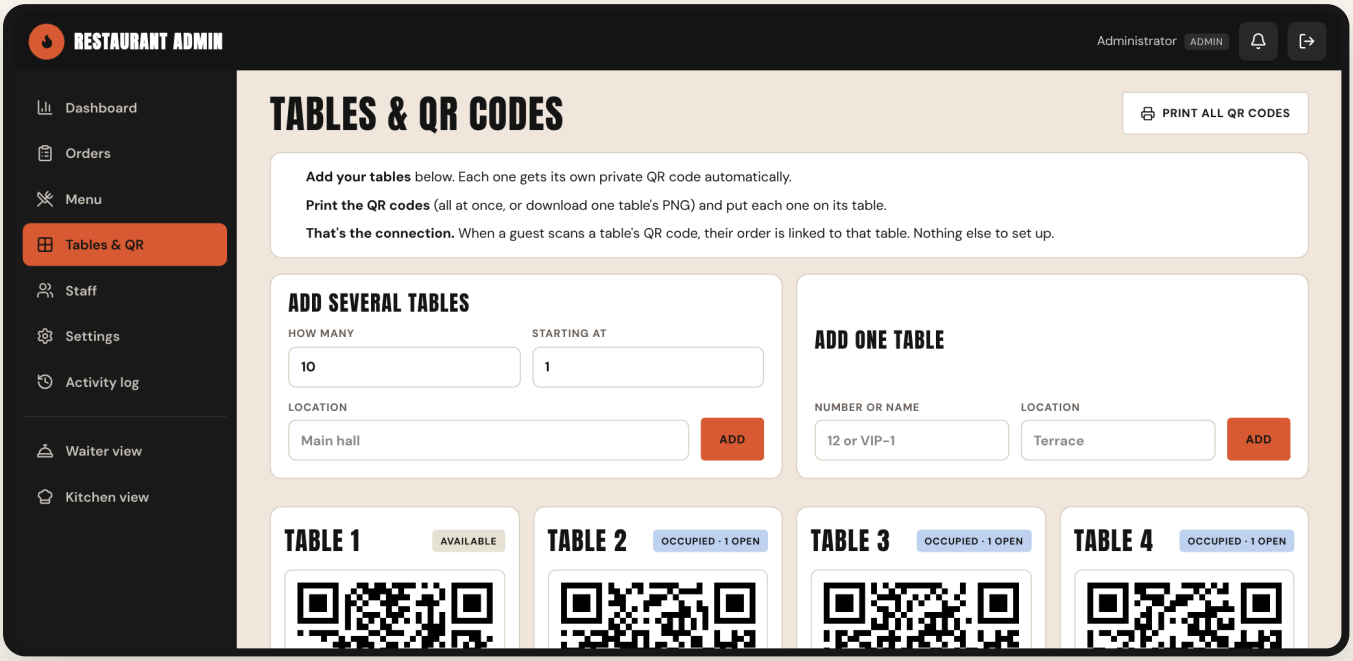

- Call the waiter
- Request the bill
- Ask for water, utensils or napkins
- Status shown: waiting, received, on the way
- No duplicate requests

FOR EVERY GUEST

- English, Kurdish and Arabic, right-to-left included
- Works on phones, tablets and computers, no app to install
- “Open now” label from your opening hours
- A message from you when something is paused

TABLES AND QR CODES

EVERY ORDER KNOWS ITS TABLE

SET UP IN MINUTES

- Add a block of tables at once, or one at a time
- Each table gets its own private QR code
- Print all QR codes on one sheet, or download one as an image
- Add a location such as Main hall or Terrace

CONTROL EACH TABLE

- Switch a table off and its QR stops working
- Make a new QR if one is lost or copied. The old printout stops working
- Mark tables occupied or free (it also updates by itself with orders)
- Assign a waiter to a table

THREE WAYS TO IDENTIFY A TABLE

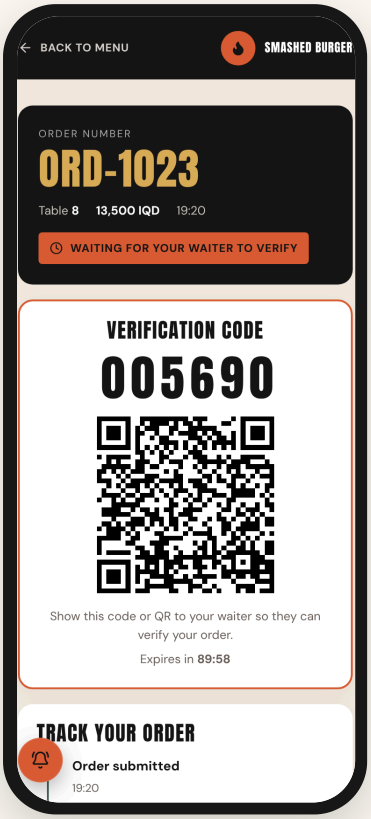

- Scan the QR on the table (main way)
- Pick from the list of tables, if you allow it. These orders are always verified
- Waiter shows a one-time QR for the guest to scan (valid 15 minutes)

SAFE BY DESIGN

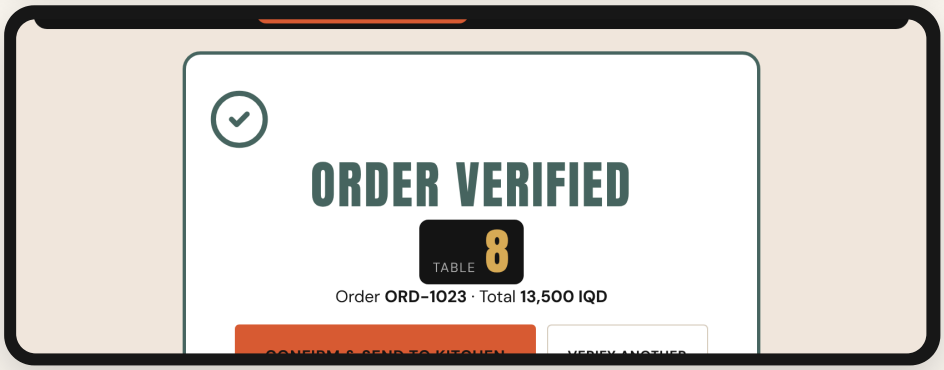

- The QR holds a private code, not just the table number
- Table sessions end after a set time (default 6 hours)
- You choose whether guests may pick their own table

WAITER VERIFICATION

CONFIRMED IN PERSON, EVERY TIME

TWO WAYS TO VERIFY

- Type the guest's 6-digit code
- Or scan the guest's QR with the tablet camera
- The waiter sees the table, items and total first
- Then confirms and sends it to the kitchen

PROTECTION BUILT IN

- Codes expire (you choose how long, default 90 minutes) and work once
- Wrong or old codes show a clear message
- Too many wrong attempts pause that waiter for a few minutes
- A scanned QR from another place is ignored

RECORDS

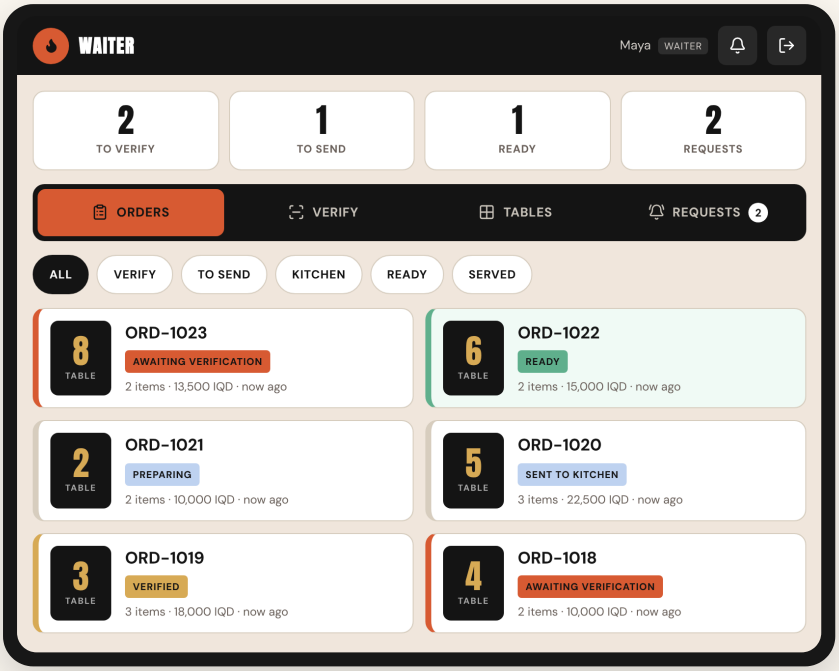

- Who verified each order and when
- Rejected or cancelled orders need a reason, and the guest is told
- Full order history with every step and person

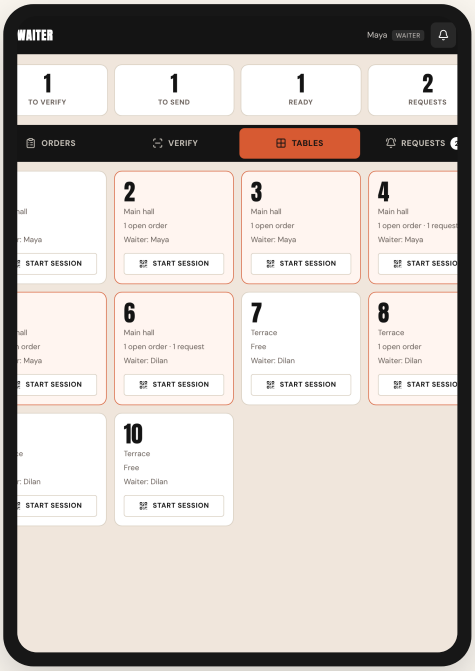

YOU CHOOSE HOW STRICT

- Every order verified (recommended)
- Or QR orders go straight to the kitchen
- Orders from guests who picked their own table are always verified

WAITER SCREEN

THE WHOLE FLOOR IN ONE SCREEN

ORDERS

- Live board: waiting for verification, to send, in kitchen, ready, served
- Filter by stage and see counts at the top
- Open an order for items, notes, who did what and when
- Confirm to the kitchen, mark served, complete
- Cancel with a reason, add private notes for the team

ALERTS

- Sound alert for new orders and ready food
- Browser notifications when the screen is in the background
- Messages when an order is cancelled or a guest needs help
- Screens refresh by themselves

GUEST REQUESTS

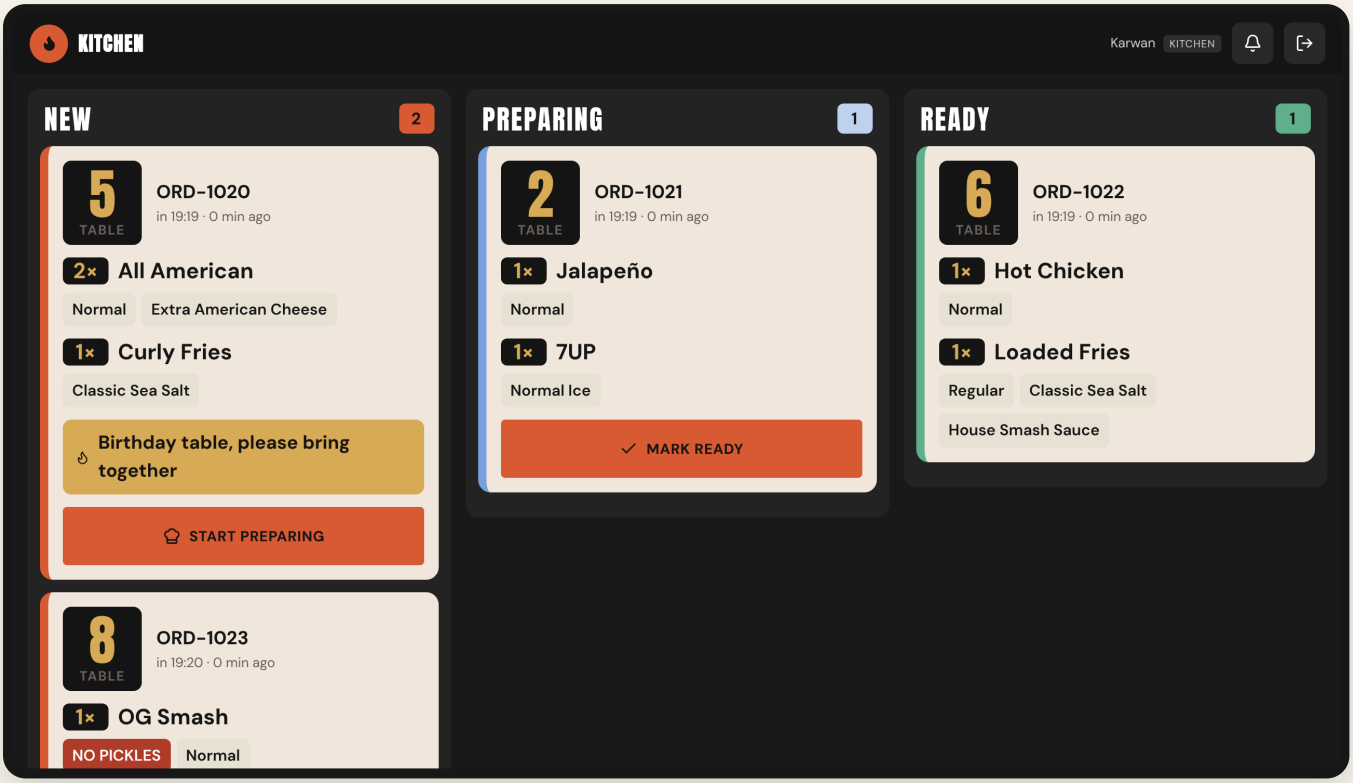

- Call waiter, bill, water, utensils, napkins
- Mark received, on the way, done
- The guest sees the status live

TABLES

- See which tables are busy, with open orders and requests
- Start a one-time session for a guest
- Works on a phone or tablet with large buttons

KITCHEN SCREEN

EVERY ORDER, NOTHING MISSED

WHAT THE KITCHEN SEES

- Three columns: New, Preparing, Ready
- Table number in large type
- Every dish with its options
- Removals such as “No pickles” in red
- Special instructions and guest notes highlighted in yellow

SIMPLE TO USE

- One tap to start preparing, one tap to mark ready
- The waiter is notified the moment food is ready
- Orders waiting too long get a warning outline
- Sound alert for new orders

ONLY WHAT MATTERS

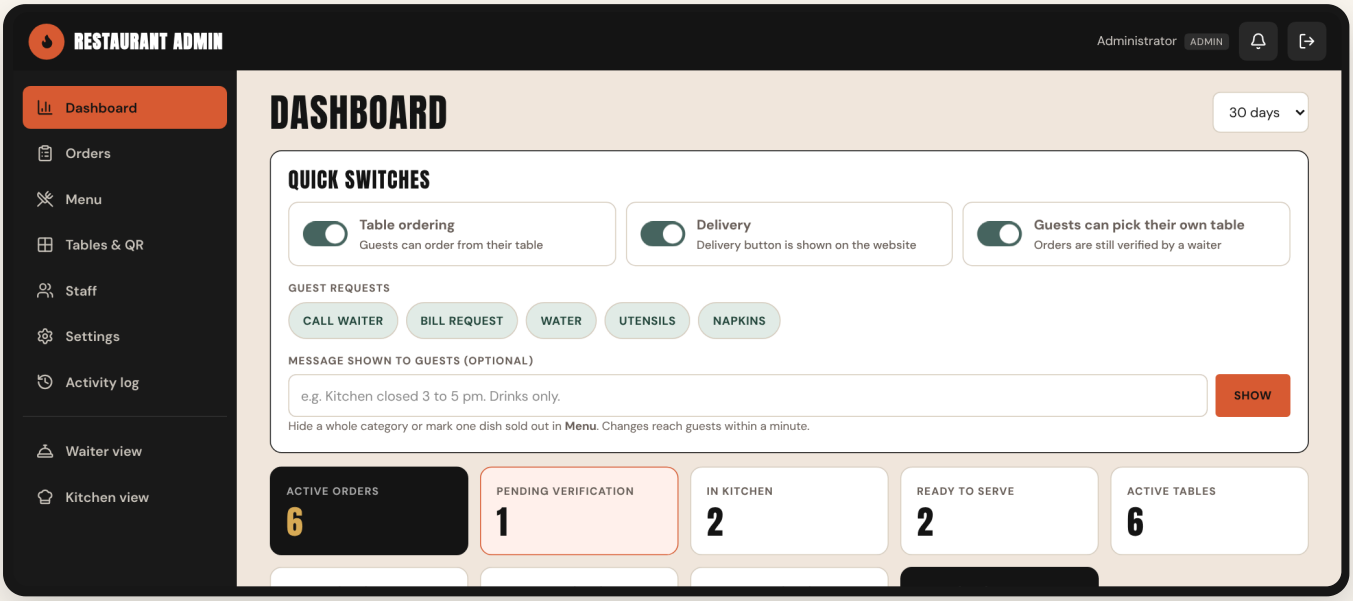

- Only verified, confirmed orders appear
- Cancelled orders are announced
- Kitchen staff cannot see prices, staff or settings

WORKS ANYWHERE

- A tablet, a monitor or a phone above the grill
- Updates live, with no refreshing

OWNER DASHBOARD

KNOW YOUR RESTAURANT

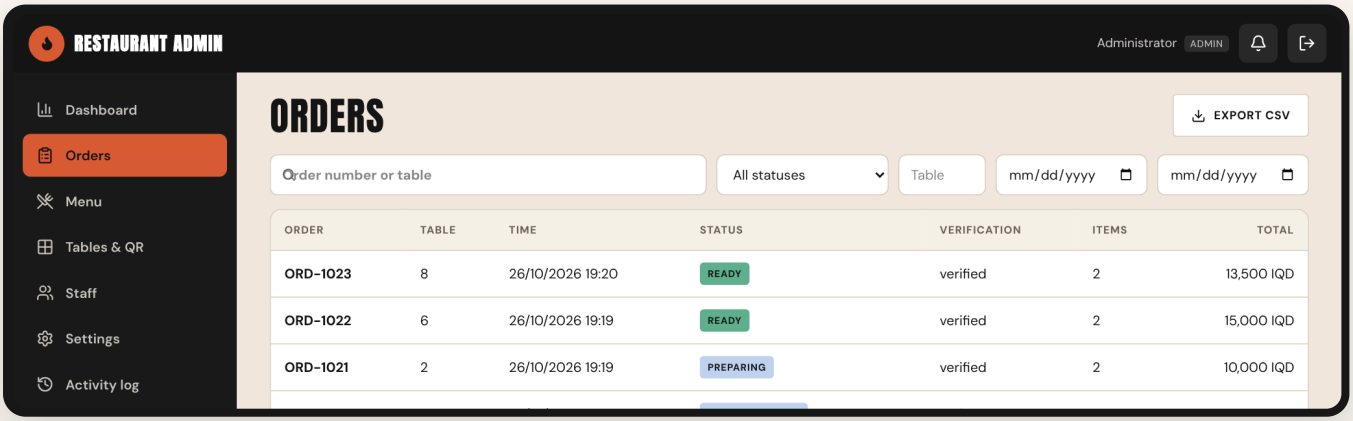

LIVE NUMBERS FROM REAL ORDERS

- Active orders, waiting verification, in kitchen, ready
- Orders, completed and cancelled for today, a week, a month or three months
- Sales and sales by day
- Best-selling dishes
- Tables in use

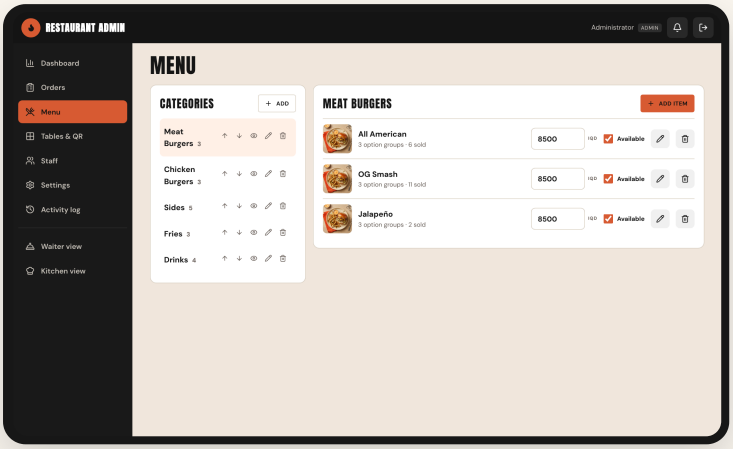

ORDERS AND HISTORY

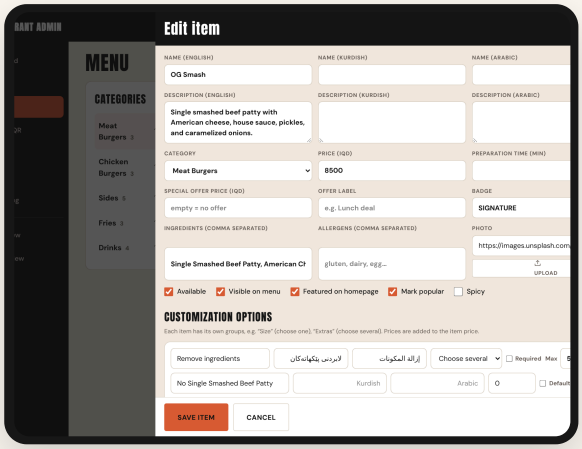

- Search by order number or table
- Filter by status, table and date
- Open any order to see items, notes and who handled it
- Export to a spreadsheet
- Activity log of sign-ins, changes and edits

MENU CONTROL

YOUR MENU, YOUR RULES

CATEGORIES AND DISHES

- Add, rename, reorder, hide and delete categories
- Add, edit, hide and delete dishes
- Change a price right in the list
- Mark a dish available or sold out with one click
- Past orders always keep the price the guest paid

THE DISH EDITOR

- Name and description in English, Kurdish and Arabic
- Photo upload (checked to be a real image)
- Preparation time, badge, spicy, featured, popular
- Special offer price with a label
- Ingredients and allergens

YOUR OWN OPTIONS PER DISH

- Groups such as Size, Extras, Sauce, Ice
- Choose one or several, required or optional
- Extra price for each option
- Pick a default and switch single options on or off

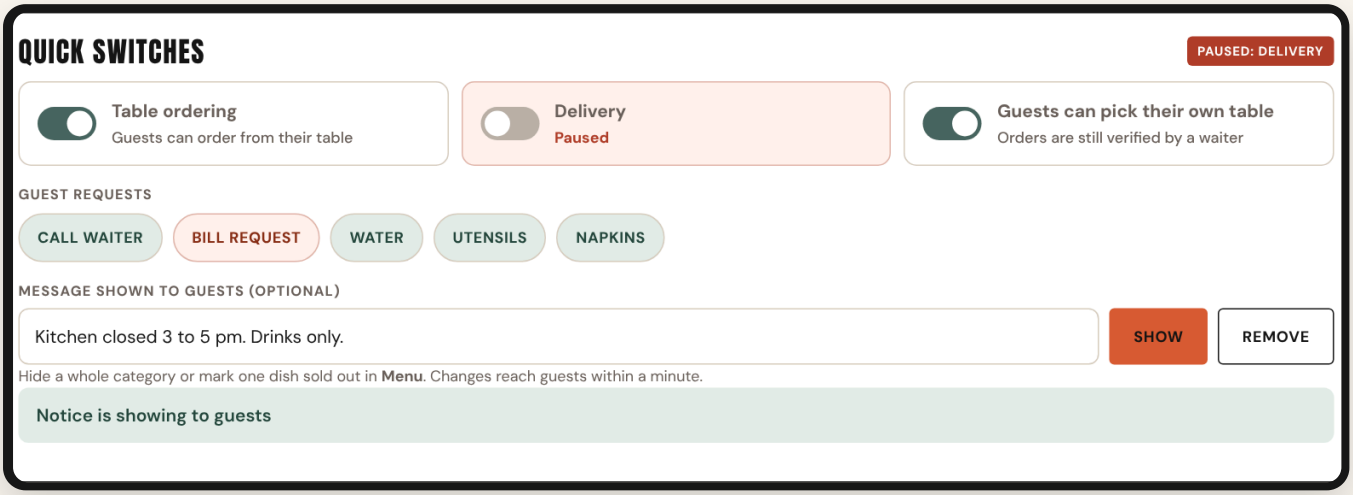

ALREADY LOADED

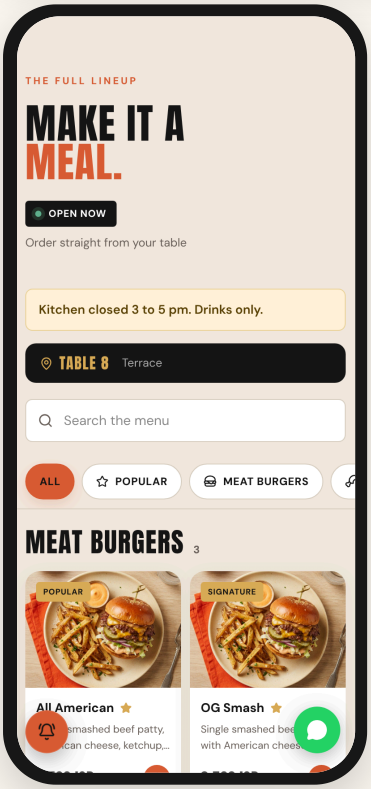

- Your 18 dishes and 5 categories
- Your prices, descriptions and options
- Everything can be edited at any time

QUICK SWITCHES NEW

PAUSE ANYTHING, FOR AS LONG AS YOU LIKE

One tap at the top of the dashboard. Guests see the change within a minute, and you can switch it back just as fast.

What guests see
Your message and a clear ordering-paused note.

SWITCHES

- Table ordering: pause all ordering, menu stays visible
- Delivery: hides the delivery chip and shows “Delivery paused”
- Guests picking their own table: turn off to allow QR only
- Each guest request: call waiter, bill, water, utensils, napkins

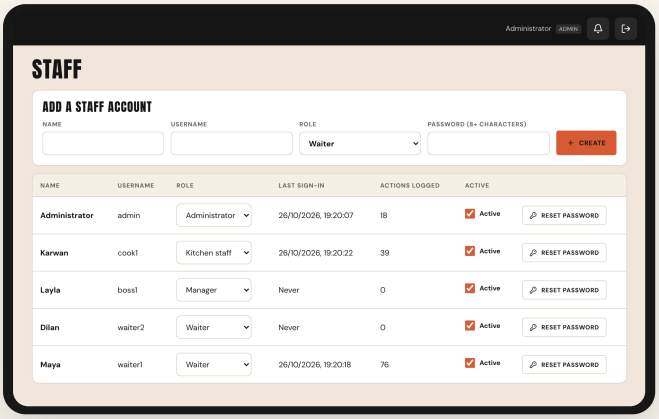

MESSAGE TO GUESTS

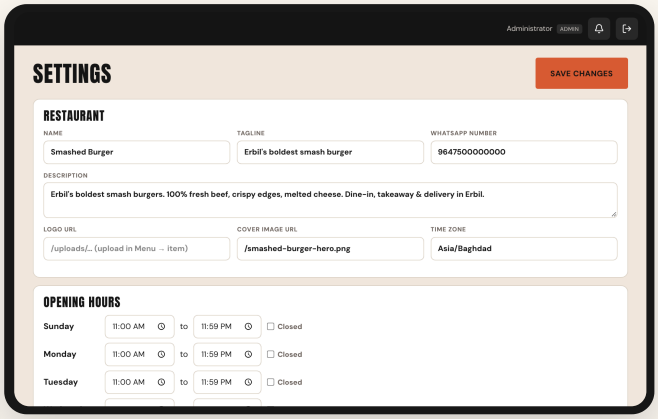

- Write a short notice, for example “Kitchen closed 3 to 5 pm. Drinks only.”
- Shown on the menu and in the tray
- Remove it with one tap

ALSO FOR A SINGLE ITEM

- Mark one dish sold out
- Hide a whole category
- Both in the Menu page

EVERYONE SEES ONLY WHAT THEY NEED

WHAT THEY CAN DO	WAITER	KITCHEN	MANAGER	ADMIN
Verify, confirm, serve orders	●	–	●	●
Prepare and mark ready	–	●	●	●
Answer guest requests	●	–	●	●
Menu, prices, availability	–	–	●	●
Tables, QR codes, quick switches	–	–	●	●
Sales, reports, export	–	–	●	●
Staff, settings, activity log	–	–	–	●

STAFF

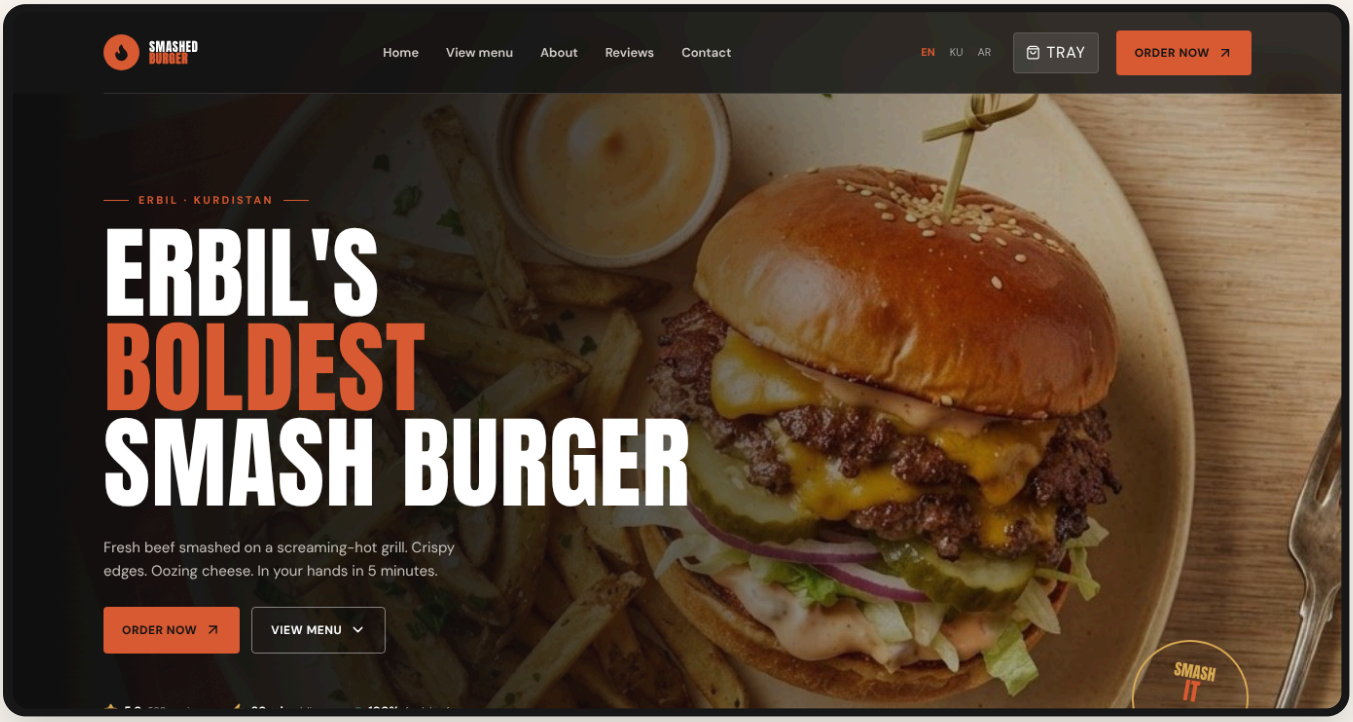

- Create accounts and choose a role
- Switch someone off and they are out at once
- Reset passwords
- Each person signs in with their own name

SETTINGS

- Name, tagline, description, WhatsApp number
- Opening hours for every day
- Tax and service charge, currency label
- Code lifetime, table session length, workflow rules, languages, sound alerts

THE WEBSITE

YOUR BRAND, FRONT AND CENTRE

PAGES AND SECTIONS

- Hero with your headline and photo
- "Built like a good product" story panel
- Featured dishes
- The full ordering menu
- Our story, guest reviews with a write-a-review form
- Contact, opening hours, phone and WhatsApp
- Interactive map with directions

MADE FOR GUESTS

- English, Kurdish and Arabic with a language switch
- Looks right on phones, tablets and computers
- Fast loading, optimised photos
- Delivery button opens WhatsApp, and can be paused
- Staff link in the footer (ordering version)

Two versions: the public website at your web address shows the menu for everyone. The ordering version (table QR, waiter, kitchen, owner) runs on your restaurant's server and uses the same design.

SAFE AND DEPENDABLE

BUILT SO NOTHING GOES WRONG

PROTECTS YOUR SALES

- Prices calculated by the system, never by the guest's phone
- Unavailable dishes cannot be ordered
- No double orders from double taps or bad connections
- Past orders keep their prices

STOPS FAKE ORDERS

- Nothing reaches the kitchen before a waiter confirms
- Codes expire and work once
- Guests can only see their own order
- Order links are long and cannot be guessed

PROTECTS YOUR TEAM

- Role-based access for every screen
- Passwords stored securely
- Too many wrong sign-ins are blocked for a while
- Deactivated staff lose access immediately

KEEPS A RECORD

- Every order step with who and when
- Activity log for menu, settings and staff changes
- Photos checked to be real images
- Exports protect against spreadsheet tricks

Tested end to end

25 automated checks cover ordering, pricing, verification, permissions, pausing, menu changes and protections. Every screen was also walked through by hand.

GOOD TO KNOW

WHAT IS NOT INCLUDED

So there are no surprises on launch day.

NOT INCLUDED YET

- Online payment. Guests can ask for the bill and pay at the table as today
- Multiple branches. Built for one restaurant
- Push messages to guests after they close the page
- Automatic assignment of tables to waiters. Assignments are saved, but every waiter still sees all tables

PLEASE CHECK BEFORE LAUNCH

- Kurdish wording should be read by a native speaker
- Add your own dish photos for the best look
- Set your real WhatsApp number and opening hours
- Run a test order with your team, from QR scan to served

TO RUN IT YOU NEED

QR

One printed code per table. The dashboard prints them.

Screens

A phone or tablet for each waiter, and one screen in the kitchen.

Internet

For staff devices and for guests' phones.

Ready to see it live? Scan a table code, order a burger, verify it as the waiter, and watch it arrive in the kitchen.
